SERVICE STATION MANAGEMENT

Service Station Management System

One solution to manage every aspect of your station

This system lets you manage the different aspects of a service station from a single solution. Built on international standards, it communicates with your fuel dispensers, monitors your equipment continuously and makes your data available in real time — while a secure licensing system protects your installation.

1 IFSF communication
Dialogue between the fuel dispensers and the system through the IFSF protocol.

2 Condor integration
Integrated in collaboration with Condor to guarantee hardware compatibility and performance.

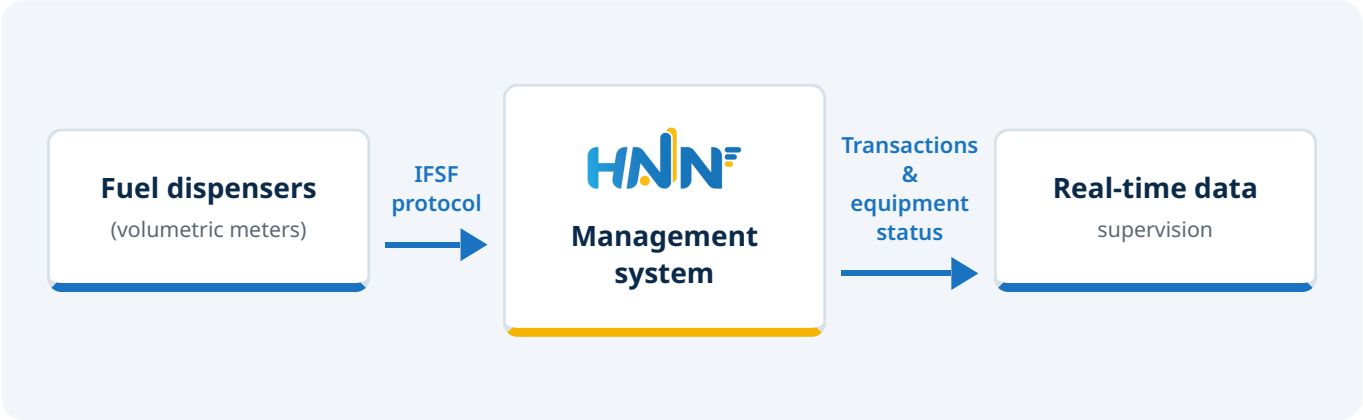

3 Real-time supervision
Instant processing of transactions and continuous monitoring of equipment.

4 Secure licence
Licence tied to the equipment's hardware ID, protecting against unauthorised installations.

SERVICE STATION MANAGEMENT

Technology & Security

A reliable, secure solution based on international standards

IFSF communication

The IFSF protocol ensures communication between the fuel dispensers (volumetric meters) and the system.

IFSF: International Forecourt Standards Forum.

Collaboration with Condor

Integration carried out in collaboration with Condor to guarantee hardware compatibility and performance.

Real-time supervision

- Instant collection and processing of transactions.
- Continuous monitoring of equipment.
- Data available in real time.

Secure licensing system

- Licence linked to the equipment's hardware identifier.
- Protection against unauthorised installations.
